SUMMARY

Software engineer with 3+ years building data-heavy financial software for asset-management and capital-markets clients. Works across C#/.NET, Python and Angular: report engines, market surveillance and the data pipelines under them. Record of on-time, high-quality delivery, architecture modernisation and measurable performance gains, including a critical batch job cut from 2 hours to 2 minutes.

SKILLS

Languages: C#, Python, TypeScript, SQL
Backend: ASP.NET Core (.NET 10), FastAPI, gRPC, REST, microservices, YARP API gateway, Quartz, SignalR, EF Core, Dapper
Data: SQL Server, PostgreSQL, Oracle, MySQL, Polars, DuckDB, Parquet, Redis
Frontend: Angular 22, RxJS, Angular Material
Security: JWT, SAML 2.0 SSO (Microsoft Entra ID), RBAC, OTP MFA, OWASP Top 10, VAPT remediation
Quality and delivery: xUnit, pytest, architecture tests, GitHub Actions CI/CD, blue/green deployment, SOLID, design patterns

EXPERIENCE

ICRA Analytics Ltd., Kolkata, India
Software Engineer (Consultant I) | Sep 2023 – Present

- Built a custom report platform that turns a client's own Excel workbook into a versioned, configurable report; migrated 32 client report formats from hand-coded legacy reports to configuration.
- Designed the platform across four services: Angular 22 UI, YARP API gateway, .NET 10 orchestration service (Quartz scheduling, mail outbox, permissions) and a Python engine (FastAPI, Polars, DuckDB over Parquet) connected by gRPC.
- Matched legacy output cell by cell at 98% or better across all migrated reports, with each report generating in under 5 minutes.
- Cut a business-critical batch job from 2 hours to 2 minutes (98% faster) by splitting sequential steps into parallel pipelines with the Task Parallel Library and moving heavy transformations to an in-process Polars engine.
- Drove architecture modernisation and system decoupling, moving legacy desktop tools to independently deployable web services with REST and gRPC contracts.
- Built a data access layer that switches between SQL Server, Oracle, PostgreSQL and MySQL at runtime, with engine-native bulk copy for millions of daily trade records.
- Enabled CI/CD adoption with GitHub Actions pipelines for the .NET API, Angular app and Python modules, replacing manual releases with zero-downtime blue/green deployments.
- Raised unit test coverage to a 90% CI gate backed by 14,900+ automated tests, and added architecture tests that enforce layer boundaries in every .NET service.
- Closed every finding from a VAPT security audit (JWT middleware, email OTP, per-IP rate limiting, hardened headers) and shipped zero-vulnerability releases; moved enterprise clients to SAML 2.0 single sign-on with Microsoft Entra ID.
- Contributed to architecture reviews, cost optimisation and ISO process audits.
- Provided L1 to L3 production support, resolving issues quickly and keeping client operations stable.
- Used AI coding agents with guardrails (planned tasks, test gates, protected-file hooks) to raise delivery speed and code quality.

SELECTED PROJECTS

Custom Report Platform | .NET 10, Python, Polars, DuckDB, gRPC, YARP, Angular 22, Quartz, Parquet

- Built a template engine that detects the tables and headers in a client's own Excel workbook, binds each column to a data point and saves the result as a versioned JSON package.
- Built a query builder that parses SQL into an intermediate representation, validates it and runs it on DuckDB, with caching that collapses identical concurrent requests.

Market Surveillance and Portfolio Overlap | .NET, Angular, SignalR, Polars

- Shipped two licensed products from one repository via compile-time modules: one flags possible market abuse in high-volume tick and trade data, the other measures holdings overlap across portfolios.

Treasury and Fund Analytics Modernisation | ASP.NET, Web API, Angular, T-SQL

- Rebuilt legacy treasury desktop tools as web applications and sped up reports through SQL Server indexing and stored-procedure tuning.

EDUCATION

B.Tech, Information Technology | 2019 – 2023
B. P. Poddar Institute of Management and Technology, Kolkata | CGPA 8.9 / 10

CERTIFICATION

Generative AI Mastery for Software Development, upGrad and Microsoft, Nov 2025
