

Abhijeet Gautam

Software Engineer | .NET Full Stack Developer

3+ years building capital markets and mutual fund software in C#, ASP.NET Core and Angular

Kolkata, India | 📞 +91 8094620049 | ✉ gautamabhijeet7@gmail.com | 🌐 linkedin.com/in/abhijeet-gautam-a49782195

TECHNICAL SKILLS

Languages: C#, Python, SQL, TypeScript, JavaScript

Backend: ASP.NET Core (.NET 8), ASP.NET MVC, RESTful Web APIs, Microservices, Entity Framework Core, Dapper, LINQ, SignalR, Background Worker Services, Multithreading, Task Parallel Library (TPL), Async/Await

Frontend: Angular (v22, standalone components), RxJS, Angular Material, Bootstrap 5, HTML5, CSS3

Data: SQL Server, Oracle, PostgreSQL, MySQL, T-SQL, Stored Procedures, Query Optimization, Python (Polars), Apache Parquet, Redis, Excel Report Generation

Security: JWT Authentication, SAML 2.0 Single Sign-On (SSO), Microsoft Entra ID (Azure AD), Role-Based Access Control (RBAC), OTP Multi-Factor Authentication, OWASP Top 10, VAPT Remediation

Engineering Practice: SOLID, Design Patterns, Dependency Injection, System Design, xUnit, Moq, Git, GitHub Actions, CI/CD, IIS, Agile/Scrum

PROFESSIONAL EXPERIENCE

ICRA Analytics Ltd. (*Kolkata, India*)

Sep 2023 to Present

Consultant I

- Brought a business-critical batch job down from 2 hours to 2 minutes (98% faster) by splitting its sequential steps into parallel pipelines in ASP.NET Core (.NET 8) and moving the heavy data transformations to an in-process Python (Polars) engine.
- Built a self-service custom reporting service on mutual fund data as part of a microservices backend. Users set up the Excel report they need for their own requirements and generate it themselves, without a developer building each report.
- Wrote one data access layer that switches at runtime between SQL Server, Oracle, PostgreSQL and MySQL, so every client deploys on its own database from the same codebase. Loaded millions of trade records a day through the native bulk-copy path of each engine (SqlBulkCopy, PostgreSQL binary COPY, MySqlBulkCopy) with Parquet staging.
- Closed the findings from a VAPT security audit with JWT authentication middleware, email OTP as a second login factor, per-IP rate limiting and hardened security headers (CSP, HSTS, X-Frame-Options), and moved enterprise clients to SAML 2.0 single sign-on with Microsoft Entra ID (Azure AD).
- Built features end to end across 34 Angular standalone components and their ASP.NET Core Web APIs, including live upload progress over SignalR for long-running imports, which users previously had to check by refreshing the page.
- Set up GitHub Actions CI/CD pipelines that build and deploy the .NET API, the Angular app and Cython-compiled Python modules to IIS and a Windows service, replacing manual releases.

KEY PROJECTS

POMA (Prevention of Market Abuse) & Portfolio Overlap

ICRA Analytics

ASP.NET Core (.NET 8), C#, Angular, SQL Server, Oracle, PostgreSQL, MySQL, Python (Polars), SignalR

- Market surveillance platform that flags possible market abuse in high-volume tick and trade data, with a companion tool that measures how much holdings overlap across portfolios. The two are sold as separate licensed products built from one repository, with modules switched on or off at compile time.

Treasury Solutions & MFI Explorer

ICRA Analytics

ASP.NET Core, ASP.NET MVC, Web API, Angular, SQL Server

- Rebuilt legacy treasury desktop tools as web applications with RESTful Web APIs and Angular reporting modules, and made reports load faster through SQL Server indexing and stored procedure tuning.

EDUCATION & CERTIFICATION

B.Tech in Information Technology

2019 to 2023

B. P. Poddar Institute of Management and Technology, Kolkata | CGPA: 8.9 / 10

Generative AI Mastery Certificate for Software Development, upGrad & Microsoft

Nov 2025
